How to Connect to VPN via Pulse Secure

Please note: Connecting to VPN requires a **two-step authentication process**. The first part of this process requires your OUHSC username and password. The second part of the process requires a secondary password. The secondary password can only be used one time, and therefore must be generated every time you connect to Pulse Secure.

**INSTALLING DUO MOBILE**

The first part of the initial setup is installing Duo Mobile to a mobile device. This application is used to generate your secondary password, as noted above. The instructions on this can be found on the Intranet (intranet.nursing.ouhsc.edu). Once Duo Mobile is installed and accessible, you can proceed with connecting to VPN via Pulse Secure.

**CONNECTING TO PULSE SECURE**

- Launch your Pulse Secure application, either found on your desktop, or in your programs menu.
- Select ‘Connect’ to begin establishing your VPN connection
- Enter your OUHSC Credentials (username/password)
After successfully entering your OUHSC credentials, you will be prompted for your ‘Secondary Password’, this is your one-time password obtained from your DUO Mobile app.

After successfully entering your ‘Secondary Password’, you will be connected to the OUHSC Network.
